

# **KRAIBURG TARSA** the focus is on tarsal joints

The comfort zone lying mat with its gentle "hilly landscape" in the tarsal zone

INNOVATION AWARD **EuroTier WINNER 2016** 

additional shock absorption through its blade profile

spoils your cows: pliant air cushioned structure made of elastic ball shaped segments

- gently holds the litter like many small "litter barriers"
- it can still be cleaned easily

- optimal and permanent softness for every load condition
- the soft lying area within the mat edges supports the correct resting position of the cow
- proven 3-layer structure in the front section

#### specially designed tarsal zone in the rear third of the mat:

- pliant air cushioned structure made of elastic ball shaped segments on the upper side
- ▶ additional shock absorptive blade profile on the bottom
- pressure relief for sensitive tarsal joints when lying down
- better air circulation keeps the skin drier
- even small amounts of litter are held in place
- improved sure-footedness, especially when getting up and when leaving the cubicle
- integrated soft slope to rear edge promotes drying off

Significant litter savings compared to deep-litter cubicles.

However, some litter is necessary to absorb moisture and increase animal welfare.

**connecting bar** engages flush with the surface and facilitates professional installation

## System dimensions:

thickness: approx. 60 mm

width:

adjustable with connecting bar

mat width:

## **Initial results from tests**

### TARSA: assessment of tarsal joints

■ healthy / injuries (skin abrasions / swelling / impact on joints)

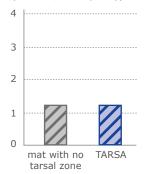

Source: Huber, 2016

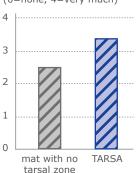

positive effect on tarsal joints: steady improvement in joint health

## Cleanness and amount of litter in comparison

Degree of soiling 9 hours after cubicle maintenance (0=clean, 4=very dirty)

Litter remaining 9 hours after cubicle maintenance (0=none, 4=very much)

Source: Huber, 2016

litter is held better on TARSA with the same cleanness

**Tip:** Chopped and milled straw have proved themselves.

## Field report: operation Niedermayer, Prien, DE

Anton Niedermayer, Prien, Germany, has a dairy farm with 50 cows. In September 2015 he renovated his cubicles and covered them with TARSA mats.

"In the beginning I was very sceptical... Can the tarsal zone be cleaned easily? Will the cows like the mats or are they "uncomfortable?" But now I say: SUPER! Super clean and the cows really like the mats. Joint health has developed positively and the sure-footedness, especially when getting up, is striking!"

## Installation – easy and fast

The guidelines to correct installation can be found in the installation instructions!

You will obtain these at your local KRAIBURG dealer or at www.kraiburg-elastik.com.
